DAY 4

🔹 **1xx (Informational)**

These mean the request was received and is being processed.

- **100 Continue** → "Go ahead, continue your request"

🔹 **2xx (Success)**

Everything worked fine ✅

- **200 OK** → Request successful, page loaded
- **201 Created** → New resource created (e.g., form submission)
- **204 No Content** → Success, but nothing to return

🔹 **3xx (Redirection)**

You're being redirected somewhere else

- **301 Moved Permanently** → Page moved forever
- **302 Found** → Temporary redirect
- **304 Not Modified** → Use cached version

🔹 **4xx (Client Errors)**

Problem is on the user/request side ❌

- **400 Bad Request** → Invalid request
- **401 Unauthorized** → Not logged in
- **403 Forbidden** → Access denied

- **404 Not Found** → Page doesn't exist
- **405 Method Not Allowed** → Wrong HTTP method (GET/POST issue)
- **408 Request Timeout** → Took too long
- **429 Too Many Requests** → Too many requests sent

🔹 **5xx (Server Errors)**

Problem is on the server side 💥

- **500 Internal Server Error** → Server crashed / generic error
- **502 Bad Gateway** → Bad response from another server
- **503 Service Unavailable** → Server is down or busy
- **504 Gateway Timeout** → Another server didn't respond in time

---

🔥 **Easy way to remember:**

- **2xx = Success**
- **3xx = Redirect**
- **4xx = Your mistake (client side)**
- **5xx = Server mistake**
